8.1. BRA_SIZING

8.2. PANT_SIZING

⚠ NOTE:

1. If the customer's usual size/calculated sales size falls outside the size chart range or it is not mapped with any fulfillment size → **Customer-Pick_wrong_size/color**
2. If the customer's measurement is a **decimal** number, round up the number.
E.g: Customer's underbust is 34.5 → Band size = 35+5 = 40
3. The difference between the full bust and band size should be ≥ -5 . Otherwise, determine the root cause based on the normal bra size (if any) until the customer updates the more reliable measurements
4. The fulfillment size of the calculated sales size should be found in the same size chart and product version that customer purchased from.
5. **What's the usual size?**

The usual size provided by the customer is accepted if it matches the sizing system used on the product's sellpage. For example: *The sizing format for the Daisy bra is 36B. Acceptable usual sizes: 36B, 40C, etc.*

6. Feedback related to the **straps**:

Which attribute (strap, underbust, or cup) did the customer mention in their feedback?	How do we check?	Example
Only strap (e.g., too long/short)	Compare the fulfillment sizes and address the strap issue	• Customer's Complaint: Strap is too short. We find that: <i>Fulfillment size purchased is 4XL and</i> <i>Fulfillment size calculated is 6XL</i> → Customer-Picked_wrong_size/color • Customer's Complaint: Strap is too long. We find that: <i>Fulfillment size purchased 4XL and</i> <i>Fulfillment size calculated 6XL</i>

		→ Content-Unfriendly_size_chart
- Strap and cup (e.g., <i>strap too short, cup too big</i>) - Strap and underbust - Strap, cup, and underbust	Focus on the cup and/or underbust feedback and disregard the strap	1. Customer's Complaint: Cups are too big, strap is too short. We find that: <i>Fulfillment size purchased 4XL and</i> <i>Fulfillment size calculated 6XL</i> → Content-Unfriendly_size_chart (Root cause selected based on cup feedback) 2. Customer's Complaint: Underbust too small, strap too long. We find that: <i>Fulfillment size purchased L and</i> <i>Fulfillment size calculated 2XL</i> → Customer-Pick_wrong_size/color (Root cause selected based on underbust feedback)

Scenarios	Fulfillment size ordered	Customer provided both full bust and underbust?	Customer provided their usual size?	How do we check?	Customer feedback	Compared two fulfillment sizes	Content-Unfriendly_size_chart	Customer-Pick_wrong_size/color	Undefined-Sizing
1	a	Yes	Yes/No	Identify the root cause based on the fulfillment size of the calculated sales size,	too small	c>a c≤a	 ✓	✓ 	

				disregarding the usual size provided by the customer. • <u>Step 1</u>: Use the customer's measurements to calculate the sales size that the customer should order <i>Guidelines:</i> • Band size = Underbust + 4 (if the underbust is even) • Band size = Underbust + 5 (if the underbust is odd) • Cup size = Full bust - band size <table><tr><td>The differences (in inches):</td><td>≤1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td></tr><tr><td>Your cup size is:</td><td>A</td><td>B</td><td>C</td><td>D</td><td>DD / E</td><td>DDD / F</td><td>G</td></tr></table> (Details in Knowledge 101: Products) • <u>Step 2</u>: Find the fulfillment size (c) mapped to the calculated sales size in the same size chart and product version that customer purchased from. • <u>Step 3</u>: Compare the fulfillment size found (c) with the fulfillment size (a) purchased.	The differences (in inches):	≤1	2	3	4	5	6	7	Your cup size is:	A	B	C	D	DD / E	DDD / F	G	too big	c<a		✓	
The differences (in inches):	≤1	2	3	4	5	6	7																		
Your cup size is:	A	B	C	D	DD / E	DDD / F	G																		
		c≥a	✓																						
	not fit	c=a	✓																						
		c≠a		✓																					
2	No	Yes	Identify the root cause based on the fulfillment size of customer's usual size • <u>Step 1</u>: Find the fulfillment size (c) mapped to	Same as in scenario 1																					

				customer's usual size in the same size chart and product version that the customer purchased from.					
				• <u>Step 2</u>: Compare the fulfillment size found (c) with the fulfillment size (a) purchased.					
3		No	No						✓

Size Logic Validation Steps for Choosing Sizing Root Cause

- **Step 1: Identify the customer's correct FFM size.**
- **Step 2: Compare it with the FFM size purchased by the customer.**
- **Step 3: Determine the expected fitting issue (outcome) based on the size difference.**
- **Step 4: Compare the customer's complaint with the expected fitting logic:**
 - If the complaint matches the expected logic → `Customer-Pick_wrong_size/color`.
 - If the complaint does not match the expected logic → `Content-Unfriendly_size_chart`.

Example:

- *Step 1: Customer's correct FFM size = XL.*
- *Step 2: Customer purchased L2 instead of XL.*
- *Step 3: Compared to XL, size L2 has smaller band AND larger cup.*

→ *Therefore, the expected issues for L2 are: band tight AND cup loose*

- **Step 4:**
 - *Customer reports band tight + cup loose* → `Customer-Pick_wrong_size/color`.
 - *Customer reports band tight + cup tight.* → `Content-Unfriendly_size_chart`.
