

Sizing-related root causes-Shirt sizing

SHIRT SIZING

⚠ **NOTE:** Priority rules when using measurements to check root causes:

1. If the customer's measurement is a **decimal** number, **round up** the number. (E.g: 34.5 → 35)
2. With feedback on **shoulder, sleeve, collar, length, etc.**, the root cause can be identified based on **waist or chest** measurements, as these attributes are considered to be related (confirmed by the SCE team). For example:
 - *Complaint: Shoulder too big*
 - *Customer's selected size: 2XL (waist range 42 - 52)*
 - *Customer's waist measurement: 44 inches*

Rootcause: **Product-Technical_issue**

3. If the waist and chest measurements fall into different size categories, determine the fulfillment sizes using both measurements. Then, identify the root cause based on each fulfillment size and prioritize the **Product -Technical_issue** if applicable. For example:

- Complaint: Overall too tight
- Customer's selected size: 3XL TactiShirt (fulfillment size 3XL)
- Customer's measurements:
Chest 50 inches matches 2XL range (fulfillment size 2XL) - Product-Technical_issue
Waist 58 inches matches 4XL range (fulfillment size 4XL) - Customer-Pick_wrong_size/color

Choose Rootcause: **Product-Technical_issue**

Scenario	Waist/Chest measurements provided?	Usual size provided?	How do we check?	Customer feedback	Compared two fulfillment sizes	Product-Technical_issue	Customer-Pick_wrong_size/color	Undefined - Sizing
1	No	No						✓
2	Yes	No	Step 1: Convert Customer's waist/chest measurements/ Customer's usual size into a fulfillment size (c)	too small	c≤a	✓		
					c>a		✓	
				too big	c≥a	✓		
	No	Yes	Step 2: Compare the identified fulfillment size (c) with the fulfillment size the customer originally purchased (a) to determine the root cause.		c<a		✓	
					c=a	✓		
				not fit	c≠a		✓	
4	Yes	Yes	Check if the case falls under Product-Technical_issue . Otherwise, log it under Customer-Pick_wrong_size/color
